GL 43

The gold medal glass-washer!

In the best restaurants the washing is made with Colged GL 43.

Gold GL 43 is the ideal product for all the situations in which it is fundamental to have **sparkling and perfectly transparent glasses**. In particular, if employed together with the water treatment systems and with Colged's specific detergents for crystals, it simply offers you the perfection. In fact it is equipped as a standard with automatic pumps for rinse aid liquid and detergent and, thanks to the rinsing system with independent arms and stainless steel sprayers which guarantee a high performance, it gives even to the most exacting sommeliers the possibility to sample in the best way the most refined wines. Furthermore, the total **clean water working** makes it suitable to face all those situations in which the washing water becomes quickly filled with particles, for example if a lot of fruit juices are used. Top tech 400 is also **versatile**: in fact it can wash glasses with a **maximum height of no less than 27,5 cm** with a cycle duration of only 2 minutes, and it permits you to start working a little later, being equipped with the useful Quick Start function that shortens considerably the heating time of the tank at the beginning of the service. Because of this, Gold 43 is the top restaurants, wine bars and trendy places glass-washer.

Clean! Less time spent in maintenance

Shining glasses! Independent circuits and high performance sprayers

Easy! A few function push buttons and temperature control in conformity with HACCP standards

Discreet! Silent with her double-walled body and the balanced door

What can Gold 43 do for your work

Sparkling glasses.

Exceptional results with Deep Drain, the effective forced circuit the cleaning the washing water.

Sanitised glasses.

The high performances integrated boiler and the temperature's electronic control with thermostat are associated with a dedicated hydraulic circuit and with high performances stainless steel sprayers to ensure you an absolute hygiene.

Less fatigue for the personnel.

Gold 43 is built to speed up cleaning operations at the end of the workday thanks to the completely automatic final self-cleaning cycle; every particular, from the completely moulded tank to the washing chamber free from internal pipes to the double surface filters is designed to speed up and simplify daily maintenance.

Economy in the consumption.

Thanks to its advanced design, the water and energy consumption is particularly reduced; the operative cycle is shorter and an effective Energy Saving electronic device avoids useless energy consumption during the intermittent work phases.

Better work environment.

Very silent, less noise and heat in the room with the double-walled integral construction.

Intuitive working.

The electronic control panel allows you to command the machine with a few big intuitional push buttons; the lighting indicators and the digital displays show the working state and the temperatures time to time, as required by the HACCP standards.

Total quality.

Gold 43 is designed to guarantee the maximum reliability; the components used are among the best to be found on the market and their position inside the machine is planned to facilitate maintenance operations in the best way. The Colged quality system is certified ISO 9000 and the productive factory is the most modern in Europe, because "Total Quality" is not only a slogan.

Always at your side.

The steel glass-washers are distributed only by Colged's authorised retailers; the company takes directly care of the assistance centres' training and modernisation; the distribution of the spare parts is ensured by Eurotec Service, a structure solely dedicated to keeping an excellent customer service.

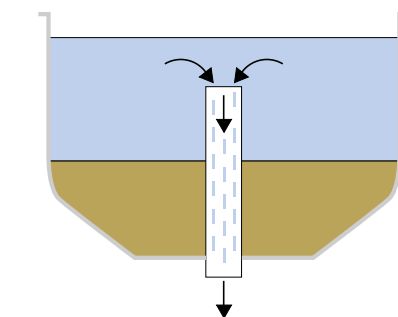

Deep Drain

Clean water and reduced consumption. Deep Drain is able to cure this apparent contradiction. At the end of every washing cycle a circuit with dedicated pump drains an important part of the water contained in the washing tank, taking it from the zone in which there is a higher accumulation of particles of heavy dirt, in this way they are eliminated. Before the next washing cycle the level is reintegrated with the introduction of clean water coming from the rinsing boiler. In this way the washing is made with cleaner water, but the consumptions are still very contained.

● Soiled water ● Detergent ● Rinse aid ● Clean water

Water mix after 1 hour - Traditional drain
